MECHANICAL SWITCH MATRICES

HIGHLIGHTS

A wide range of configurations for your signal routing needs up to 40 GHz!

- Compact benchtop modules and rack-mount systems
- SPDT, SP4T, SP6T, SP8T, and transfer switch configurations
- USB and Ethernet control options
- User-friendly GUI and API included
- High isolation

SOLID STATE SWITCHES

HIGHLIGHTS

Fast switching and high isolation to improve efficiency in your setup

- Compact switch modules and custom rack mount switch matrices
- Many combinations of SPDT, SP4T, SP8T, SP10T, and SP16T switch configurations
- Wide bandwidth
- Unique designs achieve high isolation
- User-friendly GUI and API included

PROGRAMMABLE ATTENUATORS

HIGHLIGHTS

Precise level control perfect for transmission loss simulation, signal fading / handover system evaluation, telecoms network infrastructure, and more!

- Supporting applications up to 40 GHz
- USB, Ethernet, RS232, and SPI control options
- User-friendly GUI and API included

MESH NETWORK TEST SYSTEMS

H I G H L I G H T S

Multi-port networks for interconnecting 3 to n devices or test systems

- Allows simulation of “real-world” mesh communication network in production environment
- Independently controlled attenuation on every path
- Ideal for testing Bluetooth and Zigbee devices, wireless handsets, and Wi-Fi systems

MESH NETWORK TEST SYSTEMS

Multi-Port Networks for Interconnecting 3 to n Devices

Mesh networks allow simultaneous interconnection of 3 to n devices or test systems. Common applications include testing of Bluetooth and Zigbee devices, wireless handsets and Wi-Fi systems.

Mini-Circuits has developed a range of mesh networks with independently variable attenuation on every path. This concept allows simulation of a “real-world” mesh communication network in the confined space of a production environment. Path loss can be varied independently between any pair of devices, simulating the effects of distance and interference, without affecting any other paths.

Number of ports, operating frequency and path attenuation range (up to 120 dB) can be tailored to the specific test requirement.

○ = programmable attenuator

MESH NETWORK TEST SYSTEMS

- Attenuation Range: 0 – 95dB
- Connector Options: SMA, N-Type, TNC

Model	Frequency (MHz)	Number of Ports	Photo
ZTMN-0495AS	350 – 6000	4	 ○ = programmable attenuator

ZTMN-0995A-S	500 – 6000	9	

PERFORMANCE OF ZTMN-0495AS

CUSTOM MESH NETWORK DESIGN

INSTRUMENTATION AMPLIFIERS

HIGHLIGHTS

- Large Selection of Modules
- Custom Integration
- Quick Turn Around
- Rugged Construction

INSTRUMENTATION AMPLIFIERS

ZT-270

Mini-Circuits' ZT-270 is an UHF band variable gain amplifier (VGA) with 4 independently controlled channels. Each channel provides up to 2W output power with 30 dB gain control at 0.25 dB steps. Four separate ON/OFF power switches on the front panel allow any channel to be quickly and safely isolated by terminating the input signal into an internal load.

The gain can be controlled via USB or Ethernet (supporting both HTTP and Telnet network protocols). Full software support is provided, including our user-friendly GUI application for Windows operating systems.

The system is housed in a compact 19-inch rack chassis (3U height) with SMA connectors, 4 x RF inputs on the front panel and 4 x RF outputs on the rear panel.

ZT-285

ZT-285 is a 12-channel amplifier system, supplied in a 2U height, 19" rack-mount chassis with a single AC mains power supply connection and SMA input / output connectors on the front and rear panels. Each independent amplifier channel operates over 500-2500 MHz, ideal for L-band satellite communications and telecommunications applications, achieving high gain and high directivity across the band.

NxM SWITCH MATRICES

NxM SWITCH MATRICES

BLOCKING SWITCH MATRICES

- Multiple switch paths with "one to one" configuration (each input connects to a single output)
- High reliability switches on inputs and outputs
- Bi-directional operation
- Low loss and high isolation

HIGHLIGHTS

Reliable and repeatable signal routing with USB and Ethernet control.
Ideal for multi-channel / MIMO test systems, cellular base-station / handset testing, satcoms signal routing, and more.

- 19 inch rack mount chassis
- USB and Ethernet standard control interfaces
- Custom switch configurations built to order
- User-friendly GUI and API included

NxM SWITCH MATRICES

NON-BLOCKING SWITCH MATRICES

- Bi-directional operation

FAN OUT CONFIGURATION

- Multiple switch paths with "one to many" configuration (each input can connect to multiple outputs)
- Splitters on input and switches on output

FAN IN CONFIGURATION

- Multiple switch paths with "many to one" configuration (multiple inputs can connect to each outputs)
- Switches on input and splitters on output

ZT-10X6NB

Insertion Loss (B1 Paths)

Isolation

NxM SWITCH MATRICES

ZTVX- 50Ω & 75Ω SERIES

Mini-Circuits’ ZTVX- series comprises a range of flexible, 2 by n switch matrices, available in 19-inch rack-mountable chassis with all RF connections accessible on the front panel. The 50Ω Series covers DC to 12 or 18 GHz with a 2U height while the 75Ω Series covers 5 to 2500 MHz with a 3U or 4U height. This system is available in a range of blocking switch matrix configurations from 2 x 8 to 2 x 16, ideal as a VNA extender in a wide range of applications, or expanding a standard 2 port VNA for a multi-port or multi-device test scenario:

- Parallel testing of multiple 2 port devices (eg: filter and amplifier production testing)
- Production testing of splitter/combiner or switch components with high port counts
- Testing of MIMO systems with high channel counts

SOFTWARE

The system can be controlled via USB or Ethernet (supporting both HTTP and Telnet network protocols). Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

HIGH POWER TEST SYSTEMS

HIGHLIGHTS

Mini-Circuits HPA-Series amplifiers can be used to drive 80 test channels in a configuration similar to that shown here. This setup is popular for use in high-throughput production testing applications where parallel processing of many DUTs is a requirement.

HPA SERIES

Model	F. Low (MHz)	F. High (MHz)	Gain (dB) Typ.	Output Power @ 1dB Comp. (dBm), Typ.	Saturated Output Power (dBm), Typ.
HPA-272+	700	2700	48	49	50
HPA-25W-272+	20	2700	50	38	44
HPA-50W-63+	700	6000	56	43	47
HPA-100W-63+	2500	6000	58	43	50

HIGH POWER SPLITTERS

Model	F. Low (MHz)	F. High (MHz)	Description
ZT-10HPS-272	700	2700	100W 10-Way Rack Mounted Splitter
ZT-20HPS-63-S	2500	6000	100W 20-Way Rack Mounted Splitter
ZT-184	250	6000	10x 4-Way High Power Splitter Panel

PANEL MOUNTED STRUCTURES

HIGHLIGHTS

Simplify connections and cable management in complex test racks

- 19 inch rack mount panel
- Custom configurations of adapters and splitters

PANEL MOUNTED STRUCTURES

Model	Frequency (MHz)	Description	Photo
ZT-184	500 – 6000	10x 4-Way Splitter Panel, ZN4PD1-63LW-S+	
ZT-222	350 – 6000	20x 2-Way Splitter Panel, ZN2PD2-63-N+	
ZT-229B	0.5 – 600	16x 2-Way Splitter Panel, Z99SC-62-S+	
ZT-245	300 – 1000	1x 8-Way Splitter Panel, ZC8PD1-10-S+	

PANEL MOUNTED STRUCTURES

Model	Frequency (MHz)	Description	Photo
ZT-255	500 – 8500	8x 2-Way Splitter Panel, ZX10-2-852-S+	
ZT-256	DC – 18000	12x 2-Way Splitter Panel, ZFRSC-183-S+	
ZT-230	1 – 500	8x 10dB Coupler Panel, ZFDC-10-1-S+	
ZT-275	DC – 18000	10x 30dB Attenuator Panel, BW-S30W20+	

PANEL MOUNTED STRUCTURES

Model	Frequency (MHz)	Description	Photo
ZT-183	DC – 6000	48x N-F to SMA-F Adapter Panel	
ZT-240	DC – 6000	36x N-F to N-F Adapter Panel w/ Special Mounting Bracket	
ZT-240BK	DC – 6000	36x N-F to N-F Adapter Panel w/ Black Anodized Panel	
ZT-96KFFL-KF50+	DC – 40000	96x 2.92-F to 2.92-F Adapter Panel	

SIGNAL DISTRIBUTION

H I G H L I G H T S

Splitter / combiner and direction coupler arrays for distribution of test signals through multiple channels

- Rack-mounted, panel-mounted, or benchtop structures
- Wide range of splitter configurations
- Wideband splitters up to 65 GHz

SIGNAL DISTRIBUTION

Model	Frequency (MHz)	Description	Photo
ZT-104	10	16-Way Active Splitter, BNC	
ZT-152	700 – 2500	GPS Amplifier w/ 4 Output Channels	
ZT-161RS	1200 – 1600	GPS Amplifier w/ 16 Output Channels	

SIGNAL DISTRIBUTION

Model	Frequency (MHz)	Description	Photo
ZT-201	350 – 6000	20x 2-Way Splitter Box, N-Type	
ZT-207	350 – 6000	6x 2-Way Splitter Box, N-Type to SMA	
ZT-208	380 – 4600	4x 4-Way Splitter Box, N-Type	

SIGNAL DISTRIBUTION

Model	Frequency (MHz)	Description	Photo
ZT-241	5 – 500	4x 75Ω 4-Way Splitter Box, BNC	
ZT-246	350 – 6000	16x 2-Way Splitter Box, SMA	
ZT-262	500 – 6000	4x 2-Way Splitter Box, N-Type	

CUSTOM SYSTEMS

HIGHLIGHTS

- Typical 8-weeks turnaround
- 100% RF Tested with Labview based automated test program
- Custom GUI with path control functions
- Rugged construction

RACK-MOUNTED 4 x WI-FI DIPLEXING AMPLIFIER

50Ω 2400-2500 & 5700-5900 MHz

PRODUCT OVERVIEW

ZT-228 is a 4-channel filtered amplifier for Wi-Fi. test applications. Each of the 4 inputs is split and independently amplified on separate paths for the low and high Wi-Fi bands (centered at 2.4-2.5 and 5.7-5.9 GHz respectively), with 60 dB typical rejection of the opposite band. The system is housed in a compact rack-mountable package of 1U height, with built in AC power supply.

RF SPECIFICATIONS (PER CHANNEL)

Parameters	
Low Band	
Frequency	2.4-2.5 GHz
Gain	17 dB typ
P1dB	16 dBm typ
NF	6 dB typ
High Band Rejection	60 dB typ
High Band	
Frequency	5.7-5.9 GHz
Gain	17 dB typ
P1dB	17 dBm typ
NF	4 dB typ
Low Band Rejection	60 dB typ
Input Power	10 dBm max
Pass Band Return Loss	12 dB typ

RACK-MOUNTED

WIRELESS BASE-STATION

HANDSET TEST STATION

50Ω 1600-2300 MHz

PRODUCT OVERVIEW

ZT-188 was developed as a multi-function test set for low capacity trunk radio and other wireless BTS /handset test environments. The core of the system is a 4x8 non-blocking switch matrix, allowing up to 8 handsets /terminals to be simultaneously routed to any combination of 4BTS, with input powers of up to 20 W per port in either direction. The system also provides auxiliary test ports which allow an external test signal to be injected to any BTS or the output to be monitored with an external spectrum analyser.

RACK-MOUNTED

SWITCH FILTER BANK

50Ω 1000-3000 MHz

PRODUCT OVERVIEW

ZT-254 is a compact, rack-mounted, filter bank capable of housing up to 6 switched channels. Filter choices can be made from any of Mini-Circuits' 100s of catalog or custom models, and third-party supplied filters can also be accommodated.

The ZT-254 configuration includes channels with band pass characteristics centred at 2110-2170 MHz, 1930-1990 MHz, 1805- 1880 MHz as well as an unfiltered through- path and the option to switch into a reflective load. Reverse isolation is provided through in order to protect the input signal source.

RF SPECIFICATIONS AT 25°C

Pass Bands	Value
Path 1	2110 - 2170MHz
Path 2	1930 - 1990 MHz
Path 3	1805 - 1880MHz
Path 4	1000 - 3000 MHz
Input Power	1W max
Pass Band Loss	4 dB max
Stop Band Rejection	50 dB min
Reverse Isolation	10 dB min
Pass Band Return Loss	10 dB typ

RACK-MOUNTED | USB & ETHERNET CONTROL MECHANICAL SWITCH MATRIX

50Ω DC-18 GHz

PRODUCT OVERVIEW

Mini-Circuits' ZT-276 is an integrated switching matrix designed for a custom calibration application at 9-11 GHz. The high reliability mechanical switches used are able to support a much wider range of applications from DC to 18 GHz and custom switch routings / configurations can be provided on request.

The system is housed in a 19-inch rack chassis with SMA RF connectors on the front and rear panels and a dual control system. The front panel includes push button controls with switch state indicators to allow the operator to set any switch path locally, and an override switch to enable or disable the remote communication interfaces.

The software control capability includes USB and Ethernet interfaces (supporting both HTTP and Telnet network protocols). Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

RACK-MOUNTED | USB & ETHERNET CONTROL MECHANICAL SWITCH MATRIX

GRAPHICAL USER INTERFACE (GUI) FOR WINDOWS - KEY FEATURES

- Connect via USB or Ethernet
- Run GUI in "demo mode" to evaluate software without a hardware connection
- View and set all switch states and paths
- Set all front panel switch buttons
- Configure Ethernet settings
- Upgrade firmware
- Send SCPI commands
- View temperature & fan status
